UAS

HYBRID FIXED WING VTOL (ISR PLATFORM)

SURVEILLANCE RANGE:	25+ KM
MAX ALTITUDE:	6 KM
WINGSPAN:	2.5 M
WEIGHT:	14 KG
FLIGHT TIME:	180+ MINUTES
DEPLOYMENT TIME:	<10 MINUTES
SYSTEM PORTABILITY:	24 KG (WITH RUGGED CARRYING CASE)
CRUISE SPEED:	UP TO 30 M/S
OPERATING TEMPERATURE:	-20 °C TO +50 °C

PAYLOADS

24MP, 42MP, 60MP, 100MP | OBLIQUE CAMERA
LIDAR | SURVEILLANCE PAYLOADS (EO+IR)

ACE IV

ACE IV is a next generation hybrid VTOL fixed wing UAV engineered for long range ISR, maritime and border intelligence, and high precision realtime mapping in contested environments. Built for modern multi-domain operations, it delivers 180+ minutes of endurance, GPS denied navigation, AI powered onboard processing, and superior 2D/3D mapping accuracy far beyond satellite imagery. With rugged all weather construction, rapid sub 10 minute deployment, and a 25+ km encrypted communication link, ACE IV provides commanders with decisive situational awareness, targeting data, and persistent surveillance capability across land, air, and sea.

C - UAS

VINAASHAK

KINETIC INTERCEPTION SYSTEMS

C - UAS

TECHNICAL SPECIFICATIONS

LAUNCHER WEIGHT:	20 KG (6 ROUND LAUNCHER MODULE)
INTERCEPTOR WEIGHT:	2.8 KG (WITH WARHEAD)
ENGAGEMENT RANGE:	UP TO 8 KM
THREAT CLASS:	CLASS 3 UAVS, MULTIROTORS, FIXED WING PLATFORMS
INITIAL GUIDANCE:	RADAR / RF DETECTOR FROM EXISTING DDS
TERMINAL GUIDANCE:	INFRARED THERMAL SEEKER
STRIKE METHOD:	KINETIC IMPACT + EXPLOSIVE
SPEED:	UP TO 60 M/S (216 KM/H)

KEY FEATURES

- INTEGRATES WITH RADAR-BASED ANTI DRONE SYSTEMS
- AUTONOMOUS MULTI-SHOT LAUNCHER FOR HIGH VALUE ASSET PROTECTION
- SUITABLE FOR BASES, REFINERIES, AIRPORTS, NAVAL VESSELS & ARMOUR UNITS
- SUPPORTS SWARM COORDINATED HARD-KILL OPERATIONS

VINAASHAK

VINAASHAK is an autonomous radar guided hard kill interceptor designed to neutralise hostile UAVs, multirotors, and Class III fixed wing platforms with precision and speed. Engineered for high value asset protection, it integrates seamlessly with radar based anti drone systems, using radar or RF cues for initial guidance and an infrared thermal seeker for terminal lock on. The system pairs a lightweight 2.8 kg high-speed interceptor with a rugged 20 kg multi shot launcher capable of engaging threats up to 8 km away, delivering kinetic impact and explosives to ensure total target destruction. Built for military bases, refineries, airports, naval vessels, and armoured formations, VINAASHAK enables autonomous, rapid response, swarm capable hard kill operations against modern aerial threats.

TECHNICAL SPECIFICATIONS

LAUNCHER WEIGHT:	4 KG
INTERCEPTOR WEIGHT:	2.8 KG (WITH WARHEAD)
ENGAGEMENT RANGE:	UP TO 500 M
THREAT CLASS:	CLASS 3 MULTIROTOR & FIXED WING UAVS
GUIDANCE:	INFRARED THERMAL IMAGING SEEKER
STRIKE METHOD:	KINETIC IMPACT + FIRE DAMAGE EFFECT
SPEED:	60 M/S (216 KM/H)
LAUNCH MODE:	HAND LAUNCHED, SOLDIER OPERATED

KEY FEATURES

- RAPID DEPLOYMENT COUNTER FPV SOLUTION
- AI THERMAL SEEKER FOR FIRE-AND-FORGET ENGAGEMENT
- IDEAL FOR SOLDIER CONVOYS, FRONTLINE TRENCHES & PATROL TEAMS
- LIGHTWEIGHT, RUGGED CONSTRUCTION

VINAASHAK - HL

Designed for modern asymmetric battlefields, VINAASHAK HL kinetic interceptor provides frontline units with an immediate, portable, and hard kill response against hostile drones, FPVs, and low flying unmanned threats. Compact, soldier deployable, and built for rapid launch under pressure, it delivers high speed interception using autonomous terminal guidance and onboard intelligence to negate targets with precision. Engineered for contested environments, it enables Infantry, special forces, and mobile air defence teams to neutralise rogue drones within seconds, protecting troops, convoys, and critical assets without the need for heavy infrastructure or complex setup. Rugged, reliable, and purpose built for the Indian battlefield, this interceptor gives soldiers a decisive edge in close range counter UAS engagements.

SOFTWARE SUITE

REAL TIME VIEW

SOFTWARE

TECHNICAL SPECIFICATIONS

PAYLOAD WEIGHT: 1.5 KG

(REAL TIME GEOSPATIAL PAYLOAD)

HIGH RESOLUTION DAYLIGHT CAMERA

EMBEDDED EDGE COMPUTER (AI-ENABLED)

PROPRIETARY GEOSPATIAL PROCESSING SOFTWARE

GNSS MODULE WITH CORS CORRECTION

MAPPING PERFORMANCE

REAL TIME MAPPING (ONBOARD PROCESSED):

10 CM GSD - 100+ SQ KM PER FLIGHT

15 CM GSD - 150+ SQ KM PER FLIGHT

DATA DOWNLINK

- LIVE DOWNLINK OF PROCESSED MAP TILES
- SUPPORTS REAL TIME OVERLAYS, INTELLIGENCE TAGS, AND METADATA
- SECURE ENCRYPTED TRANSMISSION TO GCS

RLTM

The Rapid Time Tactical Mapping System is a transformative advancement in battlefield geospatial intelligence, enabling forces to generate live, high resolution maps directly from the UAV while it is still airborne, eliminating dependence on cloud processing or external infrastructure. It combines a high resolution camera, AI enabled edge computer, proprietary mapping software, and CORS corrected GNSS to deliver mapping accuracy far superior to commercial or military satellites. As the UAV flies, the system processes imagery onboard and streams live, encrypted map tiles to the Ground Control Station, empowering commanders to execute real time target acquisition, fire correction, reconnaissance, change detection, and mission planning. Fully operable in cloud denied, GPS denied, and EW contested environments, this innovation merges intelligence generation and intelligence consumption into a single seamless workflow, giving the forces unprecedented situational awareness and decision superiority in dynamic operational environments.
